Requirements Document (Draft)

Suggestions for Improvement

1. **Referencing:** Use Harvard-type referencing instead of inserting complete URL addresses. Cite the literature and list in the bibliography.
2. **Introduction:** Good introduction but short. Can be improved. State the outline of the document.

Project Scope-

3. **Points-based system:** Reconsider this and preferably describe its technical details/mechanism.
4. **User scope:** Describe the users being targeted (young/elderly etc.)

Domain Analysis-

5. *Currently no food sharing sites in the UK* – reconsider the correctness of this statement and specify the presence of this concept more clearly.
6. Good literature review – cite the app/website.
7. Analysis of where product fits.
8. Mention limitations in terms of technology.
9. Shed some light on competition with international sites/apps.

Proposed Deliverables (Gantt Chart)

10. **Chart Orientation:** Put Gantt chart in Landscape orientation and fit in one page.
11. **Task Division:** Reconsider tasks assigned to "all". Those who don't work on design and implementation can work on testing instead.

Identified Risks, Assumptions, Dependencies and Constraints

12. Third party software
13. **Site Abuse:** Who would be responsible if something goes wrong between collection – drugs, expiry etc.

Functional Requirements

14. **Profile Update:** Allow users to update profile.
15. **Search:** Can add filtering and sorting.

Non-Functional Requirements

16. Focus on accessibility, usability, security, responsiveness etc.

Development Approach

17. AWS – Avoid abbreviations and shortcuts, specify everything completely.
18. Mention the **Software Development Approach** adopted (Waterfall, Agile etc.)

General

19. Summarise the report at the end, followed by bibliography. Use the template.
